3D Property Systems

The 3D Property Systems chosen for investigation were:

1) Western Australia (WA)
2) South Africa (SA)
3) Singapore
4) New Zealand (NZ)

Unintentionally, the original legislation in each of these systems was largely based on Strata Title NSW. Due to this the general structure of these systems does significantly parallel the NSW Strata System. This being said, there were quite a number of differences revealed, particularly in regard to the information shown on the 3D Property Plan. It was interesting to see the alternative methods used in these systems to define their schemes.
