

# Quick Guide of DJI P4Pro+ Mapping (with built-in screen controller)

Y. Zhou (SAGE @ CVEN @ UNSW)

## 1. Third party app (e.g. Pix4Dcapture) installation

- 1) Update P4Pro firmware to the latest version.
- 2) Download the pix4dcapture APK and Ctrl DJI APK to a micro SD card on a computer or in a web browser in the controller;
- 3) If the apps are downloaded into a SD card, Insert the micro SD card in the RC;
- 4) Install both the pix4dcapture APK and Ctrl DJI APK apps;
- 5) Use a micro USB cable to "shortcut" the micro USB port and the USB2 port on the back of the controller (see the photo below);
- 6) Run Ctrl DJI to check if it can connect to the drone. If not, go to settings -> apps menu on the RC to stop DJI GO 4, and then run the ctrl+dji app;

**NOTE:** Alternatively, download [APKpure apk](#) first and install it. After that to download Pix4d capture and ctrl+DJI via APKpure app. Insert the micro SD card in the RC;
